LARGER FRUIT • EASY TO PICK • BEAR YOUNG

Inter-State is doing more basic research in the production of Dwarf Fruit Trees than any other nursery in America. These Dwarf Fruit Trees are becoming tremendously popular simply because their small size makes it possible for millions now to grow their own delicious home-grown fruit even if their yard is small. Orchardists are planting them because they bear younger, often just a year or two after planting, are easy to take care of, and the fruit is larger.

Dwarf Pear Trees

They grow scarcely taller than your head, except Bartlett is taller. Fruits are larger. Bear very young. Plant 2 varieties so they can cross-pollenate and thus produce more fruit. Plant 8 to 10 feet apart.

The Great New Everbearing Strawberry

FA 9 Superfection is a tremendous bearer. You will have delicious berries next spring, summer and fall. The berries are big, firm and bright red and red all the way through. For preserves and freezing they are excellent, because they hold their shape and color. It is mighty fine when you can go out in your garden and pick fresh ripe delicious strawberries, spring, summer and fall.

Blueberries, GROW THEM YOURSELF

These are the popular cultivated Blueberries with large berries. Eat them fresh or for pies and wonderful for freezing. The bushes themselves are attractive with white flowers in the spring and waxy green foliage which colors red in the fall. We sell only the three varieties together because they must be planted in a cluster, 4 to 6 feet apart, so they can cross-pollinize. We have selected the 3 most popular varieties. Branched 3-year-old plants, almost 2 feet tall that will bear next year after planting.

With each collection we include Free, 1 pound of Aluminum Sulphate. Mix 1 tablespoon per gallon of water when watering after planting and again in the summer. This will make your soil acid, the type of soil in which Blueberries do best.

HARDY HEDGES

Bridal Wreath Hedge

HANDSOME *Bridal Wreath*

FH 3 Bridal Wreath (*Spirea Van Houtte*)—This photograph shows the beauty of Bridal Wreath, America's most popular and widely planted untrimmed flowering hedge. Millions of small white blooms cover the gracefully arching branches, every spring, without fail. Requires no special care and lasts a lifetime. Perfectly hardy, grows everywhere, in full sun or partial shade. You see it all over America and everywhere it is attractive and thriving. Makes a marvelous hedge or screen 5 to 6 feet tall. Plant 2 to 3 feet apart.

AMAZING ROSA *Multiflora*

FH 7 Rosa Multiflora Japonica—The conservation people recommend this for a living hedge where you have plenty of room, for erosion control and an excellent wild life refuge. However, we do not advise using it on small city lots because when not trimmed it makes a bushy, thorny plant 6 to 8 feet tall and almost as wide. Has white flowers in spring followed by red fruits which the birds like. Hardy up to central Iowa. We have seen many fine untrimmed hedges on farms. Plant 18 to 24 inches apart.

Winter-Green **The Perfect Hedge, Holds Foliage All Winter**

FH 154 Winter-Green (*Euonymus Erecta, Small Leaf*)—This shrub is very much like the Winter-Green pictured on Page 39. But its leaves are smaller and it grows hardly 3 feet tall and is almost as wide. Makes a very dense, bushy plant that makes an ideal hedge because it never needs to be trimmed. Also it holds its foliage all winter. At first the leaves are a rich deep green then gradually take on an attractive purple tinge. Thrives in sun, part shade and full shade. If you want a narrower or smaller hedge, just a trimming or two, a year, will give you exactly what you want. Plant 18 inches apart. The 18 to 24-inch are heavily branched, and will give you a good hedge effect when planted. Winter-Green gives you an evergreen hedge at a fraction of the cost of Evergreens. POSTPAID.

HARDY *Privet* HEDGE

FH 2 Hardy Russian Privet (*Amoor River North*)—Is by far the most popular hardy trimmed hedge in the northern states. It makes a permanent hedge, lasting for generations. Not only adds beauty, it also protects your yard especially if you have a corner lot. It is fine for a division line between yards. Can be trimmed to any desired height, making a thick, dense hedge, without thorns, right down to the ground. Requires trimming only twice during the summer. But if you trim it 3 or 4 times, it becomes more dense and bushy. Leaves are rich, dark green and hang on until very late fall. Plant 1 foot apart.

CHINESE ELM

FH 1 Chinese Elm—Is America's fastest growing hedge, making a good showing in just a few months. It is the first to leaf out in the spring and one of the last to shed in the fall. You can trim to any desired height from 3 to 10 feet, as a hedge or tall screen. The more you trim it the more dense and compact it becomes. We recommend that after planting, you cut off nearly all of the top, leaving only 5 to 6 inches above the ground. This will make a bushier, more dense hedge. Plant 8 inches apart.

New, Fast-Growing HAMBURG HYBRID ELM

FT 3 This is an entirely new tree, a Hybrid Elm, the fastest growing tree we have. In just ordinary soil and under normal conditions, it grows 6 to 10 feet a year. It grows so rapidly that in just five years after planting, you will have a handsome shade tree. It makes a shapely tree with large, dark green leaves. It has proven to be absolutely immune to the diseases which are killing the American Elm trees. Also, it withstands wind and sleet storms very well. The trees are entirely too large to go by parcel post so we ship them, trimmed ready for planting, by express collect. We send along some extra stock to help pay the express cost.

The Sunshine Shrub

THE *Sunshine* SHRUB

FS 48 Hypericum, Kalmianum. The picture at left shows the neat, compact form of this grand shrub. It makes a perfect mound, 2 to 3 feet tall and 3 feet wide, very dense and bushy. We call it the "Sunshine Shrub" because of the cheery brightness it brings to home plantings. The bright, golden-yellow flowers, shown in the inset at left, are produced all summer long. The bluish-green foliage is attractive in itself. It makes a perfect single specimen, a wonderful border or low hedge and is attractive in a group planting. Very easy to grow, not particular as to soil, grows in full sun or part shade, even in quite dry places where most shrubs will not live. In severe winters the tops will die down. Next spring just cut off the old tops and new growth will come up from the roots. We believe this to be one of the very best flowering shrubs. Find a place in your yard where you can plant it this fall. You will be delighted at the beauty it will add to your home next summer. **POSTPAID.**
